Single Colour LED Matrix

-16x6 RED-

1   Project Description

1.1   Introduction

Enter some text here.

1.2   Hardware

1.2.1   MCU

The LED MATRIX is built around a ATmega328P AVR microcontroller. This MCU is based on advanced RISC [1] architecture, 8 bit MCU and 23 programmable I/O lines. For controlling the LED MATRIX shift registers are used, 2 for Column and 1 for row, due to shift registers few MCU I/O lines are used.

1.2.2   LED Matrix

Single colour RED 5mm LEDs used to build the matrix, total of 128 LEDs required for 16x8 matrix.

An array of transistors configured as switch to provide required current for each row of LED matrix.

1.2.3   Power supply

The project utilises a transformerless capacitive power supply design. Such a design is helpful in reducing the overall cost of project and also utilises fewer components thus saving space and cost.

1.2.4   Input

The project is aimed to dynamically modify the display commands through an input source like PC or BLE. Such a feature helps in modifying the display at will rather than modifying the source code.

3.2 Control Unit

3.2.1 MCU

T<small>HE</small> MCU is the central processing unit of the system. For this application/project the ATmega328P, by Atmel corporation, provides all the feature required. Following is the list of features [1].

- Advanced RISC architecture

- 32K bytes of in-system self-programmable flash program memory.

- 1Kbytes EEPROM.

- 2Kbytes SRAM.

- Two 8-bit Timer/Counters

- One 16-bit Timer/Counter

- Six PWM channels

- 8-channel 10-bit ADC

- USART

- Master/slave SPI

- I2C

- watchdog timer

- On-chip analog comparator

- Six sleep modes

3.2.2 Oscillator Circuit

3.2.3 Reset

3.2.4 Port Assignment

3.2.5 Voltage Level Indicator

3.2.6 Display Intensity controller

3.3 Power Supply

3.3.1 Power Switch

3.3.2 Capacitive Power Supply

3.3.3 Filter

3.3.4 voltage Regulation

3.3.5 Current Consumption

3.4 LED Matrix

3.4.1 LED

3.4.2 Transistors

3.4.3 Shift Registers

3.5 Input

4   <u>Software</u>
